Profile

Dedicated **Offensive Security Engineer** with a strong foundation in identifying and exploiting systemic security flaws across web and mobile ecosystems. Proven track record of conducting authorized penetration tests on production environments, uncovering high-impact vulnerabilities in authentication, authorization, and session management. Experienced in Active Directory exploitation, achieving complete domain dominance in time-boxed engagements. Committed to delivering clear, actionable risk communication through technical reporting and remediation guidance.

Education

Bachelorette in Computer Science | Minor in Mathematics

Forman Christian College (A Chartered University)

CGPA: 3.9 (6x Vice Rector's Honor List for Academic Excellence)

2021/03 – present
Lahore

Certificates

- Certified Web Security Expert (CWSE) – Hackviser ☑
- Certified Associate Penetration Tester (CAPT) – Hackviser ☑
- Web-Pentester Job Path – HackTheBox (In Progress)
- Web Security Academy – PortSwigger (Active Practitioner)

Skills & Expertise

Offensive Security — Web/Mobile Application Pentesting, API Security Testing, Network Reconnaissance, Vulnerability Research.

Defensive & SIEM — Wazuh Manager/Agent configuration, ELK Stack, Suricata IDS, Log Analysis, Security Monitoring, Vulnerability Detection, Malware Analysis.

Toolskit — Nmap, Nessus, Nikto, Kali, Burp Suite, Metasploit, Wireshark, BeEF, SQLMap, Ansible, Docker

Languages — Python, Bash, JavaScript, Assembly, C/C++, Java

Professional Experience

Associate Offensive Security Engineer

Tkxel ☑

2025/09 – Present
Lahore

- Conducted Web & API Pentesting. Executed authorized black-box and grey-box penetration tests on internal and external production-grade web, and API assets, identifying critical vulnerabilities.
- Engineered Active Directory Assessments. Orchestrated and conducted a red team operation through AD assessment resulting in domain-level compromise through misconfiguration abuse and credential escalation, demonstrating critical organizational risk.
- Reporting & Remediation: Authored comprehensive, client-facing penetration testing reports detailing reproduction steps, impact analysis, and specific remediation roadmaps aligned with OWASP Top 10.

Engineering Intern

Tkxel

2025/07 – 2025/08
Lahore

Rotated through cross-functional mentorship i.e Cybersecurity and DevOps, focusing on Agile methodologies and secure code review practices.

Projects

Cyber Sentinel - Security Monitoring SIEM (FYP) ☑

Final Year Project

2024/11 – 2025/06

- Developed a low-cost, open-source security monitoring solution integrating **Wazuh**, **ELK Stack** and **Suricata IDS** on a dedicated environment.
- Engineered real-time intrusion detection for System or Network threats on endpoints, achieving high detection accuracy.
- Built a Python-based automated installer and GUI manager to streamline SIEM deployment for small-scale enterprise environments.
- Send Email Alerts for critical security events

Automated Pentest Report Generator

Personal Project

- Designed a tool to parse standardized JSON vulnerability data and generate formatted, professional reports in Word and PDF formats.
- Reduced reporting overhead by automating repetitive formatting tasks and ensuring consistent documentation across different testing engagements.

Offensive Security Home Lab

Personal Project

2024/08 – present

- Set up virtualized lab using VirtualBox with Kali as attack, and multiple victim machines (Metasploitable 2 & 3, Ubuntu Server, Windows 10).
- Simulate real-world attack scenarios, including aggressive network reconnaissance, bruteforce login attempts, privilege escalation, and post-exploitation techniques.
- Implemented offensive security testing using Metasploit Framework and Nmap for vulnerability analysis and exploitation.
