Profile

Offensive Security Engineer focused on identifying and exploiting systemic flaws across web, API, and Active Directory environments. Experienced in authorized black-box and grey-box assessments spanning production, staging, and isolated infrastructure, with findings covering the full OWASP Top 10 and beyond, including business logic and architectural weaknesses. Demonstrated full domain compromise through misconfiguration abuse and credential escalation. Delivers clear, actionable risk communication through technical reporting and remediation guidance.

Education

Bachelor's in Computer Science | Minor in Mathematics

Forman Christian College (A Chartered University)

CGPA: 3.9 (6x Vice Rector's Honor List for Academic Excellence)

2021/03 – 2025/06

Lahore

Certificates

- Certified Web Security Expert (CWSE) - Hackviser [🔗](#)
- Certified Associate Penetration Tester (CAPT) – Hackviser [🔗](#)
- Web-Pentester Job Path - HackTheBox
- Penetration Tester Job Path - HackTheBox (In Progress)

Skills & Expertise

Offensive Security — Web Application Pentesting, API Security, OWASP WSTG, Network Recon, Vulnerability Research, Active Directory

Defensive & SIEM — Wazuh Manager/Agent configuration, Suricata IDS, Security Monitoring, Vulnerability Detection, Log/Malware Analysis.

Toolkit — Curl, Nmap, Burp Suite, ffuf, SQLMap, Metasploit, Wireshark, BeEF, Bloodhound, AImpacket, NetExec, Mimikatz, Hashcat, Docker

Languages — Python, Bash, JavaScript, Assembly, C/C++, Java

Professional Experience

Associate Offensive Security Engineer

Tkxel [🔗](#)

2025/09 – Present

Lahore

- Conducted Web & API Pentesting. Executed authorized black-box and grey-box penetration tests on internal and external production-grade web, and API assets, identifying critical vulnerabilities.
- Engineered Active Directory Assessments. Orchestrated and conducted a red team operation through AD assessment resulting in domain-level compromise through misconfiguration abuse and credential escalation, demonstrating critical organizational risk.
- Reporting & Remediation: Authored comprehensive, client-facing penetration testing reports detailing reproduction steps, impact analysis, and specific remediation roadmaps aligned with OWASP Top 10.

Engineering Intern

Tkxel

2025/07 – 2025/08

Lahore

- Rotated through cross-functional mentorship i.e Cybersecurity and DevOps, focusing on Agile methodologies and secure code review practices.

Projects

Cyber Sentinel - Security Monitoring SIEM (FYP) [🔗](#)

Final Year Project

2024/11 – 2025/06

- Developed a low-cost, open-source security monitoring solution integrating **Wazuh**, **ELK Stack** and **Suricata IDS** on a dedicated environment.
- Engineered real-time intrusion detection for System or Network threats on endpoints, achieving high detection accuracy.
- Built a Python-based automated installer and GUI manager to streamline SIEM deployment for small-scale enterprise environments.
- Send Email Alerts for critical security events

Automated Pentest Report Generator

Personal Project

- Designed a tool to parse standardized JSON vulnerability data and generate formatted, professional reports in Word and PDF formats.
- Reduced reporting overhead by automating repetitive formatting tasks and ensuring consistent documentation across different testing engagements.

Offensive Security Home Lab

Personal Project

2024/08 – present

- Set up virtualized lab using VirtualBox with Kali as attack, and multiple victim machines (Metasploitable 2 & 3, Ubuntu Server, Windows 10).
- Simulate real-world attack scenarios, including aggressive network reconnaissance, bruteforce login attempts, privilege escalation, and post-exploitation techniques.
- Implemented offensive security testing using Metasploit Framework and Nmap for vulnerability analysis and exploitation.
